3) Objectives and Targets

We do not currently hold a documented pollution prevention plan.

4) Progress in reducing toxic substances

Toxic substance emissions that become airborne during the manufacturing processes, either by means of welding or plasma cutting of metal plates have been eliminated in 2013 when the air filtration systems were installed.

All unused metal solids are sent to an offsite recycling facility. The offsite recycling ratio is directly related to the amount of production completed in a calendar year.

There was a slight decrease in toxic substance recycling 2013 from the previous year. This was due to a decrease in production.

5) Certification

I, Nathalie St-Pierre certify that the above-mentioned information is accurate.
