3) Objectives and Targets

We do not currently hold a documented pollution prevention plan.

4) Progress in reducing toxic substances

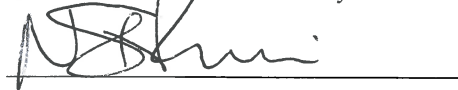

Toxic substance emissions that become airborne during the manufacturing processes, either by means of welding or plasma cutting of metal plates have been eliminated in 2013 when air filtration systems were installed.

All unused metal solids are sent to an offsite recycling facility. The offsite recycling ratio is directly related to the amount of production completed in a calendar year.

There was a slight increase in toxic substance recycling in 2016 from the previous year. This was due to a boom in market demands and thus required our company to expand and to increase production levels. Note that copper levels were reduced since the steel supplier has reduced the amount of copper alloy in their products.

5) Certification

I, Nathalie St-Pierre certify that the above-mentioned information is accurate.
